## **DETAILED ACTION**

1. Upon further review of the present application, restriction is required as shown below.

## Election/Restrictions

- 2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-19, 25 and 26, drawn to shot shell, classified in class 102, subclass 450.
  - II. Claims 20-23, drawn to method of increasing the capacity of a firearm, classified in class 86. subclass 44.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case increasing the capacity of a firearm can be accomplished by having a compressible wad.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

3. If Invention I above is elected, applicant is further required under 35 USC 121 to elect one of the following disclosed species for persecution on the merits to which the

claims shall be restricted if no generic claims is finally held to be allowable. Currently, claim 1 is generic.

- a. the embodiment wherein the spring is crimped to the shell.
- b. the embodiment wherein the spring is engaged to said shot cover.
- c. the embodiment wherein the spring is engaged to the wad.
- 4. After election of the above species (a-c), applicant is further required under 35 USC 121 to elect one of the following disclosed species for persecution on the merits to which the claims shall be restricted if no generic claims is finally held to be allowable. Currently, claim 1 is generic.
  - aa. the embodiment wherein the spring is helical spring
  - bb. the embodiment wherein the spring is an air spring.
  - cc. the embodiment wherein the spring is foam spring.
  - dd. the embodiment wherein the spring is formed of a polymer.
- ee. the embodiment wherein the spring formed from a material having a memory bias so that it is compressible when longitudinal bias is applied.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Application/Control Number: 10/646,592

Art Unit: 3641

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lulit Semunegus whose telephone number is (703) 306-5960. The examiner can normally be reached on Mon-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Carone can be reached on (703) 306-4198. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
